SWENext: Young Inventors Program

Engage Young Women Inventors!

In partnership with local SWE Sections, Invention Convention Worldwide Affiliates can encourage female inventors to join SWENext. SWENext is a way to connect with SWE members and other SWENexters. SWENext is open to students in grades K-12. Students can work on projects that use engineering to help people in the local community.

Your Opportunity

- Help your students explore engineering. Female inventors in high school who join SWENext can explore engineering, gain valuable experiences and get ready for college.
- Expand each student’s network. The female inventors who join SWENext will expand their network and have additional STEM experiences.
- Support STEM pathways. Linking your students to SWENext gives them more exposure to STEM careers.

Your Obligation

- Encourage. Encourage female inventors to join a SWENext in their local area through exhibition space, educational sessions or online registration.
- Welcome. Welcome SWE Section members to your events, and help them connect with young inventors through exhibition space, workshops or other sessions.

How to Get Started

1. Fill out and submit the attached contact form. We will research the best local SWE Section contact for you, given your interests, and make the connection.
2. Connect with your local SWE Section contact, start the conversation and decide on a course of action.
3. Enjoy the fruits of your engagement as you inspire future young women inventors.

Quick List

- Fill out and submit contact form.
- Connect with your local SWE Section contact and start the conversation.
- Encourage female inventors to join SWENext.
